REPORT BOTANICAL GARDEN

The state of many and the terminangulare terminants and the state of t

served that the natural bounds; but in the living ounds; but in the living of the external condingunds; but in the living of this observed natural reversal of the laws of andent agent residing in laws, and give direction ven to the present time, of all vital phenomena. Clusively directed to the been thought worthy of inciple," or, as it makes non to all organic mathon to all organic mathon only as a means to decay, rather than as to decay, rather than as by. Though we can not hange, yet this tendency

except in con. IST. ratal to 11 The paragraph in which ne is allucanted of my lecture is in the next such a criticism. He is at fault in his objections to my reference to his "recent works alone;" for in these alone does he adopt my views, and as these views are an abandonment of his correlation theory, he is equally at fault in referring them back to his memoir of 1850, "with such modifications as the advance of science has suggested" to him. He is no less at fault in assuming that I called in question his "reputation for truth and honesty." The question was merely in regard to justice to myself; and I did not go behind the facts to impugn his motives, with which I had nothing to do, and which had nothing to do with that question. As there was another horn to the dilemma in which he had unfortunately allowed himself to be placed, no system of logic would justify his selecting one to answer, and at the same time leaving the other untouched. If he had treated the other alternative in a way which I believe he might truly have done, no doubt this communication would have been uncalled for, and he would not have felt the necessity of sustaining his "reputation for truth and honesty" by argument; but as he elected it rather to impute my remarks to an "ignorance of the facts in the case," nothing is left me but to present to the world the facts, that it may judge between us.
